

ARGUS SPECTRUM

Integrated short circuit isolators 240 devices in the loop Loop length up to 4 km Reliable data exchange

9 million devices sold 200 000 successful projects Passed tests in 83 countries 30 years on the market

INTELLIGENT FIRE DETECTION

Addressable fire equipment by Argus Spectrum

Cloud Service

When discussing Argus Spectrum technologies, particular attention should be given to the Stretz-Cloud cloud service. This service provides access to installed systems for the servicing organization and other authorized personnel.

Through the cloud service, installed systems are continuously monitored, and any malfunctions are promptly identified and resolved. You can use Stretz-Cloud through a web browser, mobile app,

or software, and your data remains encrypted and secure on servers. You can even remotely track things like smoke, temperature, dust levels, and more.

The fire alarm system's real-time status is just a smartphone away for those in charge of safety. This cloud-based approach assures steady supervision and quick action, keeping the fire alarm system dependable and effective.

The image illustrates the Stretz-Cloud service architecture. On the left, a network map shows multiple buildings connected to a central globe icon. In the center, the Stretz-WEB web interface is displayed, showing a hierarchical view of systems and zones. The interface includes a search bar, a status grid for various zones (e.g., 1 Zone, 2 Zone, 3 Zone, etc.), and an events log with columns for Number, Time, Event, Segment, Zone, and Sensor/User. On the right, a smartphone displays the mobile app interface, showing a list of objects and their status.

Buildings are seamlessly linked to the Stretz-Cloud cloud service, extending accessibility to the installed systems for the authorized personnel. This cloud service ensures ongoing monitoring of the systems, swiftly detecting and addressing any malfunctions that

may arise. The fire alarm's status in the building also remains readily accessible to engineers responsible for system maintenance – all it takes is a smartphone to check.

Maintenance engineer

Maintenance manager

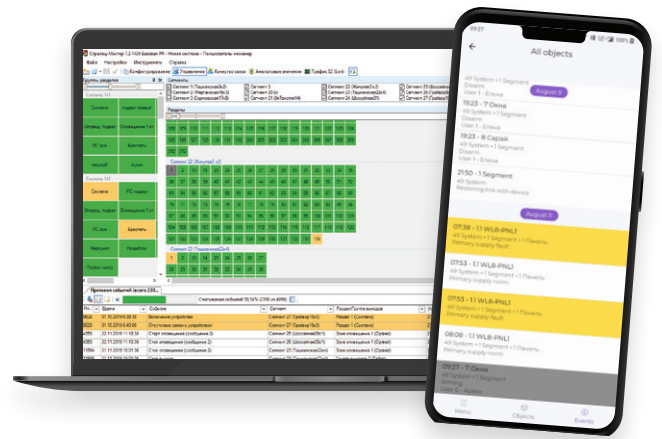

Streletz-Cloud's fortified servers and impenetrable end-to-end encryption ensure data safety up to modern standards. Your valuable information is shielded at all stages, ensuring uncompromising protection. With state-of-the-art secure servers, your

data is safe from unauthorized access, and our robust end-to-end encryption guarantees confidentiality. Trust Streletz-Cloud to keep your sensitive data locked away, setting new standards for cloud service security.

Streletz-Cloud web client is your monitoring center. All systems connected to the account are displayed on the main page. The color of the elements makes it easy to determine the status of each system.

Put the mobile client on your phone for on-the-go help. This app guides you and your client through any hiccups, even if you're not at the office. When there's an alarm or issue, you'll instantly know thanks to push notifications.

Please come check the system, I've had a yellow light, then it turned red, the screen tells me there's some kind of error, but the buttons are not responding

No longer will you need to guess the nature of a system malfunction. With Streletz-Cloud, you gain foresight before visiting the site, knowing exactly what you're up against. Is it a dust issue? Grab a vacuum cleaner. Facing a malfunctioning smoke exhaust valve? It's wiser to dispatch a seasoned engineer. Streletz-Cloud empowers you to schedule your tasks proactively rather than reacting to unexpected situations.

Product Range

Argus Spectrum offers a comprehensive product range, including analogue addressable devices. The fact that our main specialty is wireless, doesn't mean that our wired solution is compromised in any way. In fact, it is just as good as other intelligent fire systems from popular manufacturers. Our addressable product line includes smoke, heat, multi-criteria and

beam detectors, manual call points, sounders and VAD's, output and input modules. All devices come equipped with an integrated short circuit isolator. Addressable detectors by Argus Spectrum use a modification of a popular system protocol and compatible with different types of control panels.

Built-in Isolator

Short Circuit isolator is a device that stops an entire control panel loop from going down when a short-circuit happens. It does this by isolating the part of the loop where the short occurred, keeping it separate from the rest of the circuit. Once the short-circuit issue is fixed, the isolator automatically reconnects the loop, ensuring smooth operation. Fire detectors, alarm devices, and I/O modules by Argus Spectrum all come with an integrated short circuit isolator. This solution has several important advantages:

No separate devices are required. This means reduced equipment costs, and installation becomes slightly more convenient and faster.

No wasted addresses. The built-in isolators do not occupy valuable address pool in the control panel.

Easier design. System designers don't have to strategically put isolators in the loop to ensure reliability.

Technical features

Up to 240 devices in the loop

There are no standalone short-circuit isolators or communication modules that would occupy the address space.

Detection of duplicate addresses

If devices with the same addresses are connected to the loop, the panel will issue a warning, and the built-in LEDs on the devices will turn on.

Maximum current in the loop – 300 mA

The greater the maximum current, the more alarm devices can be connected to the loop.

Interference resistance

This is achieved through high voltage in the signal line (36 V) and pulse width modulation.

Reliable data exchange

Control panel repeatedly pings the devices ensuring delivery of fire signals without any delays. Connection integrity is constantly monitored and communication parameters are adjusted if needed.

Comprehensive product range

The range covers all needs of fire protection: smoke, heat, and beam detectors, sounders, MCP's, VAD's, I/O modules and equipment for smoke vent system control.

■ Fire Detectors

Smoke Detector

Patented smoke chamber: protection from dust, insects, and light

Supports drift compensation

Heat Detector

3 different modes of analysing the temperature

Combined Sensor Detector

Patented smoke chamber

Supports drift compensation

3 different modes of analysing the temperature

Beam Detector

-  100-meter max distance
-  Laser pointer for easier adjustment
-  Supports drift compensation

Call Points

Manual Call Point

-  Reliable mechanism
-  Weather-proof

Colored Call Points

-  Green – emergency door release
-  Orange – smoke & vent control
-  Yellow – suppression system activation

Input / Output Modules

Output Module

-  One output ~250V / =30V, 8A
-  External fault input

Smoke Vent Damper Module 220V version

-  Switch rated for ~220V
-  Max current – 3A
-  Monitors the actuator and power circuits
-  4 inputs for monitoring the state of the damper

Smoke Vent Damper Module 24V version

-  Switch rated for =24V
-  Max current – 3A
-  Monitors the actuator and power circuits
-  4 inputs for monitoring the state of the damper

Input Module

One programmable input for conventional detectors and other equipment

Notification Appliances

Sounder

Sound pressure level at 1 m. – 92 dB

Selection of multiple tones

Works in sync with other sounders

Fire Exit Sign

Additional insert signs included: fire, alarm, go left/right

4 brightness levels

4 modes of operation

■ Auxiliary Equipment

Detector Base

-  Ballast resistor terminal
-  Remote indicator terminal
-  Locking mechanism for tamper protection

Programmer

-  Backlit display
-  Powered by a 9-volt battery
-  Can be used to change settings of the devices

120 μ A

Duplicate address detection

When the control panel is capable of detecting devices with the same address, it makes it easier for the fire alarm engineers to diagnose and fix problems that can occur during system setup.

Integrated short circuit isolators

Built-in isolators don't take up space in the address pool of the control panel, while making the system more reliable and easier to install.

Alarm devices powered by the loop

When the alarm devices can't be powered by the loop, you need to install additional power supply units, which increases expenses on the project.

Cloud service

Cloud service gives you the ability to monitor the system and change settings from anywhere in the world

Transition Table

Equipment	Bosch product	Argus Spectrum counterpart
▼ Fire detectors		
Smoke detector	FAP-425-O-R	 Aurora-DI
Heat detector	FAP-425-T-R	 Aurora-TI
Combined sensor detector	FAH-425-OT-R	 Aurora-DTI
Beam detector	FIRERAY 50 RV, FIRERAY 100 RV (conventional)	 Amur-I
▼ Call Points		
Call point	FMC-210-DM, FMC 300RW, FMC-420RW	 IPR-I
		 IPR-I Green
		 IPR-I Yellow
		 IPR-I Orange

Equipment	Bosch product	Argus Spectrum counterpart
▼ Notification Devices		
Sounder	FNM-420-A-WH, FNM-420-A-RD	 Sirena-I
Fire exit sign	<i>no direct counterpart</i>	 Tablo-I
▼ Input and output modules		
Input module	FLM-420/4-CON, FLM-420-I2	 MV1-I (one input)
Output module	FLM-420-RHV, FLM-420-RLV1, FLM-420-NAC	 IB1-I (one output)
Output module for smoke vent dampers	FLM-420-NAC	 Klapan-I 220  Klapan-I 24
